If you use pass4sureofficial LOT-803 Certification questions and answers, you will experience actual LOT-803 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our IBM exam prep covers over 95% of the questions and answers that may be appeared in your LOT-803 exam. Every point from pass4sure LOT-803 PDF, LOT-803 review will help you take IBM LOT-803 exam much easier and become IBM certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial IBM LOT-803 course:

- * Up-to-Date IBM LOT-803 questions taken from the real exam.
- * 100% correct IBM LOT-803 answers you simply can't find in other LOT-803 courses.
- * All of our tests are easy to download. Your file will be saved as a LOT-803 PDF.
- * IBM LOT-803 brain dump free content featuring the real LOT-803 test questions.

IBM LOT-803 certification exam is of core importance both in your Professional life and IBM certification path. With IBM certification you can get a good job easily in the market and get on your path for success. Professionals who passed IBM LOT-803 exam training are an absolute favorite in the industry. You will pass IBM LOT-803 certification test and career opportunities will be open for you.

Exam Name:	Using LotusScript in IBM Lotus Domino 8 Applications Exam		
Exam Type:	IBM	Exam Code:	LOT-803
Certification	IBM Lotus Certification	Total Questions:	90

Question: 1

Neala is using a hidden field on the Request form to store a temporary value for the request status. Since this field will not be stored, Neala has created it as a Computed for display field. Neala is trying to use the code below to set the tempStatus field to "Draft" when a new document is created with the Request form. An error message displays whenever a new Request is created. What could be the problem? Sub Postopen(Source As Notes uidocument)
If Source.IsNewDoc Then Call Source.FieldSetText("tempStatus", "Draft") End If
End Sub

- A. In order for the FieldSetText method to be used, a field must be editable. Hidden fields are not editable.
- B. The Postopen event occurs before the user has input focus, so only back-end methods will work from this event.
- C. In order for the FieldSetText method to be used, a field must be editable. Computed for display fields are not editable.
- D. The Postopen event occurs after the document has opened, but Computed for display fields are not available for manipulation until after the user has input focus.

Answer: C

Question: 2

Aitana is working in the company's Inventory database. She wants to create an array called 'Assembly' that will be used to reference 10 instances of the Part class. Aitana can create a single instance of the Part class using code like this:
Dim myPart As New Part But she is having a problem creating the 'Assembly' array. What is wrong with the following line of code: Dim Assembly(9) As New Part

- A. The New keyword cannot be used to declare an array of object reference variables.
- B. 'Assembly' is a reserved word in LotusScript, and cannot be used as a variable name.
- C. If an array declared as Assembly(9) is to hold 10 elements, Option Base 0 must be used.
- D. An array cannot be used to hold multiple Class instances.

Answer: A

Question: 3

The Salary form needs an Audit History field. When documents are changed, Sahir's script must record the date/time, editor's name, and values of all changed fields before and after the change. The solution must also be usable in other forms, and must work without modification, even if new fields are added to the forms. How can Sahir do this?

- A. Write Entering event code for each field, recording field values. Write Exiting events to update Audit History if the values change.
- B. Write Postopen event code to populate a list with item names and item values as the document is opened.
- C. Write Quersave event code to examine current item values, and update Audit History for any changed items.
- D. Write onFocus event code to populate a hidden temporary field with the item values. Write on Change event code to update the Audit History if the field is changed.
- E. Write onLoad event code to populate a list with item names and item values as the document is opened. In the form onExit event, write code to examine current item values and update Audit History for any items that have changed.

Answer: B

Question: 4

Given the following piece of code, where "doc" is a Notes Document: fieldValue = doc.GetItemValue("Title")

Print "This document's title is" & fieldValue(0)

Which of the following is a correct example of using the "Extended class" syntax to replace the example code above?

- A. Print "This document's titles " & doc.Title
- B. Print "This document's titles " & doc.Title(0)
- C. Print "This document's titles " & doc.GetField.Title
- D. Print "This document's titles " & doc.GetField.Title(0)

Answer: B

Question: 5

The Notes Stream class is used to read and write which of the following?

- A. Files
- B. Network sockets
- C. Domino server console commands
- D. Binary data in Notes RichText fields (like attachments and inline images)

Answer: A

Question: 6

The error message "Error loading USE or USELSX module" can be caused by which of the following?

- A. An improperly defined Const value
- B. An ODBC connection that cannot be made
- C. An attempt to use Notes UIWorkspace in a background scheduled agent
- D. A script library that can't be found or needs to be recompiled using "Recompile All LotusScript"

Answer: D

Question: 7

Avery has been asked to write a web service in his Domino application. The web service will allow an Oracle application to query the Movie Rental database with a member identification number and receive a list of all movies the member has rented in the last 30 days. What are the language options available to Avery for writing this web service?

- A. LotusScript and Java
- B. LotusScript, but not Java
- C. Java, but not LotusScript
- D. LotusScript, Java, and @Formula

Answer: A

Question: 8

For agents that run on new and modified documents, newly received mail documents, pasted documents, or newly modified documents, what method can you use to mark each document as "processed" to ensure that a document gets processed by the agent only once (unless it's modified, mailed, or pasted again)?

- A. Notes View.UpdateAll
