If you use pass4sureofficial 000-815 Certification questions and answers, you will experience actual 000-815 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our IBM exam prep covers over 95% of the questions and answers that may be appeared in your 000-815 exam. Every point from pass4sure 000-815 PDF, 000-815 review will help you take IBM 000-815 exam much easier and become IBM certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial IBM 000-815 course:

- * Up-to-Date IBM 000-815 questions taken from the real exam.
- * 100% correct IBM 000-815 answers you simply can't find in other 000-815 courses.
- * All of our tests are easy to download. Your file will be saved as a 000-815 PDF.
- * IBM 000-815 brain dump free content featuring the real 000-815 test questions.

IBM 000-815 certification exam is of core importance both in your Professional life and IBM certification path. With IBM certification you can get a good job easily in the market and get on your path for success. Professionals who passed IBM 000-815 exam training are an absolute favorite in the industry. You will pass IBM 000-815 certification test and career opportunities will be open for you.

Question: 1

Each payment request received by a credit card company is checked for completeness, authenticated, and finally applied against online systems. The solution designer was brought in to review the current system for broad scalability, and has recommended implementation of a Transaction Process Monitor to manage the payment request workflow. What is the benefit of this recommendation?

- A. To optimize queuing between the credit card company and merchants
- B. To allow better coordination between the various business processes
- C. To optimize resource usage between the credit card company and merchants
- D. To monitor the throughput between the application server and the database server

Answer: C

Question: 2

A customer's Request for Proposal (RFP) includes a specified high level of availability for e-mail servers in a collaboration solution. The solution designer's proposal includes not only redundant server hardware, but also Tivoli performance and availability management software for the e-mail servers.

In which two ways does the addition of this Tivoli software ensure that the proposal meets the customer's business requirement? (Select two answers.)

- A. It monitors critical application processes
- B. It provides backup for networking hardware
- C. It provides failover if one server box goes down
- D. It offloads e-mail storage processing to a SAN
- E. It enables management of server components that may affect e-mail service

Answer: A, E

Question: 3

What can be used to determine whether the implemented e-business solution works the way the customer expects?

- A. Unit test
- B. Usability test
- C. GUI design test
- D. Acceptance test

Answer: D

Question: 4

Why should the solution designer remain on the project after the project manager has assumed responsibility for the implementation of the solution?

- A. To provide technical oversight
- B. To supervise the project manager
- C. To provide the details of the project plan
- D. To ensure the technical personnel are performing satisfactorily

Answer: A

Question: 5

If a solution designer is asked by a project manager and sales person for assistance, what request is NOT the responsibility of the Solution Designer?

- A. Prepare the Statement of Work
- B. Assist with establishing acceptance criteria
- C. Highlight the potential risk to the project introduced by design factors
- D. Establish rough estimates of the time and resources (people and technology) required

Answer: A

Question: 6

What test would mark the end of a successful e-business project?

- A. Unit test
- B. Component test
- C. Acceptance test
- D. System integration test

Answer: C

Question: 7

What is the final step that should be taken when implementing an e-business solution?

- A. Provide requirements for proof of concept
- B. Establish acceptance criteria and project end point
- C. Justify the business value of the e-business solution
- D. Verify that the e-business solution meets customer requirements

Answer: D

Question: 8

In a cost-saving analysis, what alternative design element should be considered in a knowledge management e-business application?

- A. Eliminating Storage Area Networks (SAN)
- B. Implementing Storage Area Networks (SAN)
- C. Eliminating extra capacity staging area for legacy data
- D. Implementing extra capacity staging area for legacy data

Answer: C

Question: 9

When creating new e-business applications, many companies mistakenly take a short-term view and tend to overlook long-term costs. What should the solution designer consider to avoid this common mistake?

- A. Hardware costs
- B. Software costs
- C. Code maintenance
- D. Development costs

Answer: C

Question: 10

An e-business solution designer is preparing to assist in the presentation of the solution proposal. What is the most important aspect to focus on to ensure customer approval?

- A. Explain the ability of the new system to scale and change
- B. Map the technical solution to the customer's business requirements
- C. Map the differences between the current workflow and proposed workflow
- D. Explain the total cost of ownership by taking support and training into consideration

Answer: B

Question: 11

What can the solution designer do to ensure the proposal meets or exceeds the customer expectations?

- A. Commit to a brand solution
- B. Ensure that the designed solution is the lowest cost proposal
- C. Ensure the proposal addresses the business and technical criteria for evaluation
- D. Focus on the newest technologies that can be used to implement the customer solution

Answer: C

Question: 12

As the e-business solution is being implemented, the team is having difficulty getting the user profile (authentication and authorization) information from individual applications. What technical guidance should the solution designer provide to the team?

- A. Develop an enterprise-wide LDAP directory of users and their access permissions
- B. Create new systems that use authentication techniques that are not based on user ID and password
- C. Create individual authentication and authorization functionality for each and every application
- D. Users should remember multiple ID and password combinations to promote the highest level of security

Answer: A

Question: 13

During the proposal process the solution designer recommends the use of an operating system for which the customer has no expertise. However, the customer insists that they are not willing to hire or train new personnel. What is the recommended next step for the solution designer?

- A. Insist on implementing the solution as designed
- B. Point out the number of other customers implementing this solution on the recommended operating system
- C. Suggest that the system administrators can call customer support when problems arise with the proposed solution
- D. Provide an alternative design, including relative costs, advantages, and disadvantages, on the customer's preferred operating system

Answer: D

Question: 14

A retail company hosts a Web site that is not integrated with its legacy proprietary fulfillment system. Employees are required to reenter orders from the Web site into the procurement system to get the warehouse to ship the ordered products. What e-business solution can be used to automate this process?

- A. A business intelligence system
- B. A supply chain management system
